

Stance Detection from Text

Technical Manual

1. Make sure you've **git**, **npm/yarn** and **Python 3.8** ready on your machine.
2. Open a terminal window and execute
`git clone https://github.com/nishavak/stance-detection-from-text.git`
3. Change current working directory to the cloned directory.
4. (Optional) Use a virtual environment to better manage the dependencies.
5. Install the necessary python packages to run the application using the command
`pip install -r requirements.txt`
6. Create a **.env** environment file with `REACT_APP_API=<your_python_api_endpoint>` entry.
For instance, `REACT_APP_API=http://localhost:8000/api/`
7. Execute `npm install && npm run build` or `yarn && yarn build` depending on the Node.js package manager you're using to create a production build of the React frontend.
8. Download saved models from the [link](#) and save them in a folder named **models** inside **api** directory. Make sure you have downloaded all the files mentioned in the `models_list.txt`
9. Make Django migrations and create a super user to view feedbacks submitted by users as an admin by executing commands
`python manage.py makemigrations`
`python manage.py migrate`
`python manage.py createsuperuser`
10. Finally, run your server, `python manage.py runserver` to check if everything works perfectly.

Folder structure

```
